Remote access to software

By Miriam Rusu (Deactivated) 2 min Add a reaction

- Virtual applications currently available
- Using a Web Browser
- Connecting to your N:\ drive
- Connecting to your OneDrive

In partnership with IST (Information Systems & Technology), the Arts Computing Office offers remote access to applications used in some courses. Remote access allows a student to run a piece of software without installing it locally on their computer or working in a computer lab. **Access is restricted to students registered in courses that are set up to use remote access to software.**

Virtual applications currently available

- Statistical Package for the Social Sciences (SPSS) opening files (*.docx)
- Free learning resources available to students for SAS
- Courses to access to SPSS VDI
- Stata 15 IC

Using a Web Browser

This option is not recommended because it requires extra sign-ins for each use, however, it can be used as a fallback.

- If you're off campus, connect to [UWaterloo's Virtual Private Network \(VPN\) for Windows](#) (you will need to be connected to the VPN or you will not be able to connect to the remote application server).
 - If you're using Internet Explorer:**
 - Download the file of registration entries (e.g., SPSSVDI.reg) you have been provided with from [LEARN](#) and double-click it.
 - If you're using Firefox:**
 - Open Firefox and type **about:config** in the address bar.
 - Click on **Accept the Risk and Continue**
 - Type **network.automatic-ntlm-auth.trusted-uris** in search.
 - Double-click the Preference name of **network.automatic-ntlm-auth.trusted-uris**.
 - Enter the URL <https://appweb.uwaterloo.ca/RDWeb>
- Using your browser, go to [RD Web Access](#) and log in with the domain/username as: **nexus\userID** (the userID is your **WatIAM** userID) and your **WatIAM password**.
- Once logged in, click on the virtual application.
- Make sure it says **Open with Remote Desktop Connection (default)** then click **OK**.
- Another window will appear asking if you want to trust the publisher of this RemoteApp program, click **Connect**.
- You will then be prompted to enter your credentials **nexus\userID** as the domain/username, and your **WatIAM password**. Click **OK**.

Connecting to your N:\ drive

Some students, faculty and staff are unable to open or locate files saved locally which would normally be accessed on a campus lab computer. If you are not on a campus lab computer, to access files locally you will need to map your N:\ drive (network drive).

- See [How to connect to your N:\ drive](#) here.

Connecting to your OneDrive

OneDrive works in a similar manner as your N:\ drive, but with more space and a faster setup. Students, faculty and staff are able to access local files saved to OneDrive if they are not on campus. The campus VPN is also not necessary for connecting to your OneDrive.

Microsoft OneDrive is available for all UW employees and students.

Complete the following steps to access your OneDrive:

- Go to [portal.office.com](#).
- Enter your **UWaterloo email** and **password**.
- Select **OneDrive**.
